

# WILDLIFE HEALTH & PATHOLOGY SHORT COURSE DOMESTIC STUDENT SCHOLARSHIP WINNERS!

The Australian Registry of Wildlife Health is pleased to announce the recipients of the Australian Student Scholarships for the Wildlife Health and Pathology Short Course being held in Sydney in February 2024. Generous sponsorship from the Cybec Foundation has allowed us to provide funding for 3 students studying in Australia within the field of wildlife health to attend the Wildlife Health & Pathology Short Course at the Taronga Institute of Science and Learning, Taronga Zoo. We would like to extend our thanks to all applicants, and our congratulations to those who have been successful in obtaining one of these scholarships.

**Dr Anna Langguth** is a veterinarian with a special passion for wildlife disease research and wildlife immunology. After working in emergency companion animal medicine for two years, she returned to academia, completing her Master's degree in Wild Animal Health at the Royal Veterinary College in London in 2022. Having previously worked on rabies vaccination in European wolves and African wild dogs, she is now focusing on the immune system of the only mammal capable of true flight, investigating the immunological potential of Australian microbats.

**Karen Kam** is a second year Doctor of Veterinary Medicine student studying at the University of Melbourne. Having a strong interest in wildlife and conservation, Karen is serving as an executive of Wildlife Disease Association (Australasia) student body and volunteering in Victorian Wader Study Group. Karen would like to work with wildlife and zoo animals after graduation and is enthusiastic to promote One Health in under developing countries.

**Dr Rebecca Souter** is a PhD candidate from the University of Adelaide. Having graduated with a degree in veterinary medicine in 2021, a passion for wildlife led Rebecca down the path of wildlife health and pathology. Rebecca's current research uses post-mortem investigations to improve our understanding of the role of anthropogenic pollutant exposure on dolphin health in South Australia and to investigate dolphin health more broadly. Rebecca's goal is to pursue a career in pathology and to make a positive impact for wildlife in a changing environment.
